

## Extended Product Infeed Magazine

Multifeeder Technology Inc. designs and manufactures automatic product feeding equipment to place flat products of various sizes, shapes and thickness on or into other items at very high speeds. The unmatched speed of the friction feeder often requires a larger infeed magazine so that the operator does not need to replenish products being fed as often.

The standard infeed magazine has a capacity of 425 mm or 17 inches of product. For greater capacity a taller magazine of 675 mm or 27 inches is available.

Contact Multifeeder Technology for high performance friction feeders.
